# Business Requirements

Business requirements for an Electronic Voting System (EVS) using blockchain technology should focus on key objectives. Here are the requirements in a concise format.

## Security:

## Transparency:

It means that before the count is released, no one can find out the details. It avoids acts such as manipulating late voters' decisions by issuing a prediction or offering a significant yet unfair benefit to certain persons or groups as to be the first to know.

## Accessibility:

To ensure that everyone who wants to vote has the opportunity to avail the correct polling station and that polling station must be open and accessible for the voter. Only qualified voters should be allowed to vote, and all ballots must be accurately tallied to guarantee that elections are genuine.
